
PREPROCESSING DATA
Download and remove duplicates if any
extract_from_url.py
date_iso_str
Download and extract directly with date + filename.
Metada are saved too
e.g.
>> python3 extract_from_url.py*
or
>> python3 extract_from_url.pt <date_iso_str> [<name_of_tar.gz_file>]
<date_iso_str> = YYYY-MM-DD
*by default, the first dataset is considered: "2020-03-20",
"comm_use_subset.tar.gz"
depends on
after 2020-03-12?
FALSE
extract_from_inner_tar.py
date_iso_str
Special case: when our content is inside of a tar.gz.
Metadata are saved too
e.g.:
>> python3 extract_from_inner_tar.py*
or
>> python3 extract_from_inner_tar.py <url_where_name_of_tar.gz_file_is>
or
>> python3 extract_from_inner_tar.py <name_of_tar.gz_file>
*by default, the first dataset is considered: "cord-19_2020-03-20.tar.gz"
TRUE
remove_duplicate_files.py
optional
cleaning_data.py
Eliminate all duplicates or copy the unique
json files to a common folder
>> python3 remove_duplicate_files.pt [<option>]
<option>:= 'copy' | 'move'
by default, option is 'copy'
Find non-valid articles, such as without
authors and remove them
>> python3 cleaning_data.py
ENTITY EXTRACTION
Extracts entities and linking:
Named Entity Recognition + Linking
merpy, nltk, metapub, bio,
collections, itertools
import ...
mer_entities.py
Difference from previous is availability to extract an user defined
items instead all
>> pyhton3 mer_entities.py setup*
or
>> python3 mer_entities.py <source_path> [<list of items_prefix>]
if any items is listed, then all are used (chebi, do, go, hp, taxon,
cido)
*update MER ontologies
CREATE DATASET
Create CORD-19 corpus dataset to
Recommender System.
MyConfiguration
import ...
create_cord19_recsys_dataset.py
Create CORD-19 corpus dataset
Two dataset are saved:
1. <user_id, item, rating, item_name, year>
2. <user_id, author_name>
>> python3 create_cord19_recsys_dataset.py*
*the input values are defined in config.ini. A docker is
used, also
